C:\Users\thlok\Documents\NetBeansProjects\Book2\src\Listing_1_1>javac HelloApp.java

C:\Users\thlok\Documents\NetBeansProjects\Book2\src\Listing_1_1>java HelloApp.java
Hello, World!

C:\Users\thlok\Documents\NetBeansProjects\Book2\src\Listing_1_1>
```

✓ **javac HelloApp.java:**

- This command creates a class file named HelloApp.class that contains the Java bytecodes compiled for the HelloApp class.

✓ **java HelloApp:**

- This command loads the Java Virtual Machine (JVM) into memory. Then it locates the HelloApp class, which must be contained in a file named HelloApp.class. Finally, it runs the main method of the HelloApp class. The main method, in turn, displays the message "Hello, World!" on the console.
